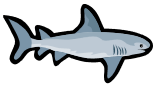
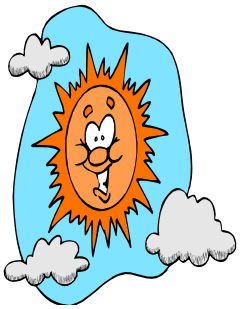
Fisher Scientific



ENVIRONMENTAL, SAFETY, & HEALTH NEWSLETTER



F.E.S.H.
3rd Quarter
2004

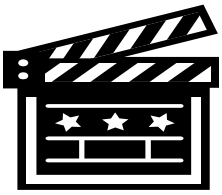
"Teamwork is the ability to work together toward a common vision. The ability to direct individual accomplishments toward organizational objectives. It is the fuel that allows common people to attain uncommon results.." - Andrew Carnegie

OUR MISSION IS TO FOCUS ON EMPLOYEE SAFETY AND ENVIRONMENTAL COMPLIANCE

In this third quarter Environmental, Safety, and Health Newsletter we wish to focus your attention on the following topics:

- **Desk of the Director~** *2004 Regulatory Affairs Conference.*
- **"From Our Home to Yours"~** *First Aid for Poison Ivy.*
- **REGULATORY Q&A~** *Safety Acronyms.*
- **ESH Alerts~** *New ESH Manager. ESH intranet site.*
- **The Safety Zone~** *Fire Safety.*
- **The Recycle Bin~** *Rag Refresher.*
- **3rd Quarter 2004 KPI's**

FROM THE DESK OF THE DIRECTOR



2004 Regulatory Affairs Conference

During the week of Sept. 26 to Oct. 1 the annual 2004 Regulatory Affairs Conference was held at Sheraton Station Square, Pittsburgh, Pa. Regulatory Affairs training for operations and ESH professionals was conducted for the entire week. The conference was a great way to welcome and get acquainted with new team members from our Apogent merger. There were approximately 110 people in attendance throughout the conference. During the conference, the following topics were covered: ***Policy and Procedures*** - Reviewed and discussed all ESH programs and policies (P&P) format and applicability. Provided policies and procedures to participants on memory sticks and demonstrated their availability on Fisher's intranet. ***Role of ESH Manager*** - Company legal counsel provided insight as to the role of the ESH Manager in the current work environment and expectation of working in these roles. ***ESH KPI's*** - Reviewed and discussed required EHS Key Performance Indicator information, methods of calculating, reporting of data, and use of data to generate improvement. ***Ergonomics*** - Discussed the fundamentals of ergonomic type injuries, common ergonomic injuries, and designing workstations, and reviewed Fisher ergonomic success stories.

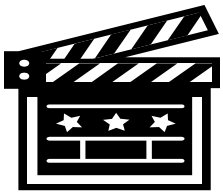
FROM THE DESK OF THE DIRECTOR

Continued…



2004 Regulatory Affairs Conference

Continued…

Fire Protection - Discussed Fisher protection scheme for new facilities and retrofits. Viewed Fisher fire demonstration video conducted at Factory Mutual Global, showing the speed and devastation of a mock warehouse fire. Discussed the importance and diligence of proper chemical storage. ***Agency Inspections*** - Reviewed procedures and documentation when an agency visits a facility. ***Industrial Hygiene*** - Provided an overview of the Fisher industrial hygiene program. Discussed work processes that may warrant analytical review of employee exposure. Discussed monitoring strategy and identified operations in need of an analytical review. ***Sarbanes-Oxley*** - Legal counsel provided an overview of the law and its applicability to the ESH field. ***ESH Ethics*** - Legal counsel provided the legal implications of the day-to-day activities of the ESH professional and the possible consequences of making the lesser decision. ***Onyx*** - Onyx account manager spoke of the means of improving hazardous waste removal services and cost efficiency. ***OSHA 10*** - Provided an OSHA - endorsed safety and health technical training course. Participants reviewed the history of the law, the applicability of the law, and specific program requirements. ***RMP/PSM*** - Reviewed the applicability of Risk Management Program and Process Safety Management program to Fisher sites, techniques of compliance, and programs established at existing Fisher sites. ***Desktop Emergency Kit and Emergency Response Plan*** - provided copies of current DEK along with pocket corporate telephone hierarchy. In addition to the topics discussed, former Pittsburgh Steelers L.C. Greenwood delivered a motivational speech on teamwork and the application to the corporate work environment. The 2004 Environmental Excellence awards were presented to Jeffery Vaughan (ESH Fisher Diagnostics Middletown) and Larry Gossett (Vice President of USDO operations) for their achievements in ESH. A special thank you to all that attended, presented, and coordinated.

Corporate ESH Staff with Celebrity Guest Speaker and Ex-Pittsburgh Steeler, L.C. Greenwood (center)

ESH Team with Environmental Excellence Award winners: Larry Gossett (Vice President of USDO) and Jeffrey Vaughan (Fisher Diagnostics Middletown).

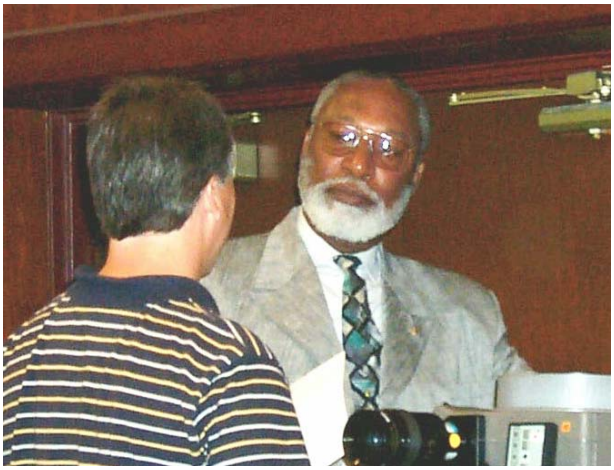
Dean Calland (Babst, Calland, Clements, Zomnir) presenting "Regulations Overview."

Mike Winek (Babst, Calland, Clements, Zomnir) presenting "Regulations Overview."

Jeff Jochims (Vice President and Assistant General Counsel, Fisher Scientific International Inc.) presenting "Your Role as an ESH Manager."

Tom Tisa (Director of Fisher Scientific ESH) presenting Environmental Excellence Award.

Don Schmidt presenting "Fire Protection Issues."



L.C. Greenwood with Scott Parmelee (Nalge Nunc) signing autographs.

FROM OUR HOME TO YOURS

Information for being safe at home….

First Aid for Poison Ivy

Poison ivy, poison oak and poison sumac are the most common plants that cause a skin rash. A sap that comes from these plants causes the rash. The name of this sap, urushiol, causes an allergic reaction. It is not really a poison. Not everyone reacts to urushiol. If you are allergic to it, though, you can get a skin rash when you:

- Touch poison ivy, poison oak or poison sumac.
- Touch clothing or shoes that have the sap on them.
- Touch pets that have the sap on them.
- Come in contact with the smoke of these burning plants.

The skin rash comes a day or two after contact with the poisonous plant. Things to look for are:

- Itching
- Redness
- Burning feeling
- Swelling
- Blisters

Prevention

Know what these plants look like and avoid them:

- Poison ivy
- Poison oak

Poison ivy and poison oak both have three leaflets per stem. This is why you may have heard this saying, "Leaflets three, let them be."

- Poison sumac. Poison sumac has a row of six to ten leaflets. One leaflet is at the end of the stem. The others are in two rows opposite to each other.

If you know you have come in contact with one of the plants, do the things below within six hours. You may prevent an allergic reaction if you do.

- Remove all clothes and shoes that have touched the plant.
- Wash your skin with soap and water.
- Apply rubbing alcohol with cotton balls to the parts of the skin that are affected.
- Rinse with water.

Self-Care / First Aid

- Make sure you wash all clothes and shoes with hot water and a strong soap. Also, bathe pets who have come in contact with poison ivy, oak or sumac. The sap can stay on pets for many days.
- Keep your hands away from your eyes, mouth and face.
- Do not scratch or rub the rash.
- Apply any of these to the skin rash:
  - Calamine (not Caladryl) lotion
  - Zinc oxide ointment
  - Paste made with baking soda - mix three teaspoons of baking soda with one teaspoon of water
  - Take a bath with lukewarm water and an over-the-counter product called Aveeno colloidal oatmeal
  - Take an over-the-counter antihistamine such as Benadryl, as stated on the label

If self-care/first aid measures don't bring relief, call your doctor

Questions to Ask

Are there any of these problems?

- Swelling in the throat, tongue and/or lips
- A hard time breathing or swallowing
- Weakness, dizziness
- Bluish lips and mouth Unconsciousness

NO

Use emergency kit with adrenalin, if available, and Get Emergency Care.

Do you have any of these problems?

- Skin that is very bright red.
- Pus.
- Rash that has spread to the mouth, eyes or genitals.
- Rash on large areas of the body or the face.

NO

See Doctor and Give first aid before seeing doctor:

- Take a hot shower, put the rash area in hot water or pour hot water over it. Make sure the water is not too hot to burn the skin. The hot water causes itching at first, but brings relief later. Do not use soap.
- Take an over-the-counter antihistamine, such as Benadryl, as stated on the label.
- For weeping blisters:
  - Mix 2 teaspoons of baking soda in 1 quarter (4 cups) of water.
  - Dip squares of gauze in this mixture.
  - Cover the blisters with the wet gauze for 10 minutes, four times a day. (Do not apply this to the eyes.)

REGULATORY Q&A

SUBJECT:
SAFTEY ACRONYMS

Many acronyms have become second nature to safety professionals. Most people know that OSHA is the acronym for Occupational Health and Safety Administration and MSDS stands for Material Safety Data Sheet. What about MUTCD or SAE? With all the acronyms used today, sometimes it's difficult to quickly recall their meaning. The following list of acronyms was compiled for use as a handy reference guide.

ACGIH	American Conference of Governmental Industrial Hygienists
ADA	Americans with Disabilities Act
AGA	American Gas Association
AIHA	American Industrial Hygiene Association
ANSI	American National Standards Institute
APHA	American Public Health Association
APR	Air-Purifying Respirator
ASAE	American Society of Agricultural Engineers
ASHRAE	American Society of Heating, Refrigeration and Air Conditioning Engineers
ASQC	American Society for Quality Control
ASTM	American Society for Testing Materials
ATC	Automatic Temperature Compensation
BS	British Standards
BSI	British Standards Institute
CAA	Clean Air Act
CAL-OSHA	California Occupational Safety and Health Administration
CAS	Chemical Abstracts Service (Number)
CERCLA	Comprehensive Environment Response, Compensation and Liability Act
CFC	Chlorofluorocarbon
CFR	Code of Federal Regulations
CGA	Compressed Gas Association OR Color Graphics Array
CSA	Canadian Standards Association
CSFM	California State Fire Marshall
CWA	Clean Water Act
dB	Decibels
dB(A)	Decibels A-Scale
DIS	Draft International Standards
DOE	Department of Energy
DOL	Department of Labor
DOT	Department of Transportation
DVO	Diffuse Viewing Only
EDP	Electronic Data Processing
EEOC	Equal Employment Opportunity Commission
EGA	Enhanced Graphics Array
EPA	Environmental Protection Agency
EPDM	Ethylene-propylene terpolymer
EPR	Ethylene Propylene
ESCBA	Escape Self-Contained Breathing Apparatus
ESD	Electrostatic Dissipative
FDA	Food and Drug Administration
FEP	Fluorinated Ethylene Propylene
FID	Flame Ionization Detector
FIFRA	Federal Insecticide, Fungicide and Rodenticide Act
FMCSR	Federal Motor Carrier Safety Regulations
FR	Flame Resistant
GC	Gas Chromatography
GFCI	Ground Fault Circuit Interrupter
GSA	General Service Administration
HCA	Hazardous Communication Act
HDPE	High-Density Polyethylene
HEPA	High-Efficiency Particulate Air (filtration)
HID	High Intensity Discharge
HMIG	Hazardous Materials Identification Guide
HMIS	Hazardous Materials Information System
HMTA	Hazardous Materials Transportation Act
HPLC	High Performance Liquid Chromatography
HVAC	Heating Ventilation and Air Conditioning
IAQ	Indoor Air Quality
IARC	International Agency for Research on Cancer
IATA	International Air Transport Association
ICAO	International Civil Aviation Organization
IDLH	Immediately Dangerous to Life and Health
IEC	International Electrotechnical Commission
IMO	International Maritime Organization
IPS	Iron Pipe Standard
ISEA	Industrial Safety Equipment Association
ISO	International Organization for Standardization
LCD	Liquid Crystal Display
LDPE	Low-Density Polyethylene
LED	Light-Emitting Diode
LEL	Lower Explosive Limit
LLDPE	Linear Low Density Polyethylene
LUST	Leaking Underground Storage Tank
MECO	Modern Engineering Company
MSDS	Material Safety Data Sheet
MSHA	Mine Safety and Health Administration
MUTCD	Manual for Uniform Traffic Control Devices
NEMA	National Electrical Manufacturer's Association
NEPA	National Environmental Policy Act
NFC	National Fire Code
NFPA	National Fire Protection Association
NFR	National Fire Rating
NIOSH	National Institute of Occupational Safety and Health
NIST	National Institute of Standards and Technology
NMFC	National Motor Freight Class
NPDES	National Pollutant Discharge Elimination System
NRC	Nuclear Regulatory Commission
NRR	Noise Reduction Rating
NSF	National Sanitation Federation
NTP	National Toxicology Program OR Normal Temperature Pressure
OD	Outside Diameter
ODP	Open-Dripproof
ORM	Other Regulated Material
ORP	Oxidation Reduction Potential
OSHA	Occupational Safety and Health Administration
PAPR	Powered Air-Purifying Respirator
PCB	Polychlorinated Biphenyl
PEL	Permissible Exposure Limit
PETG	Polyethylene Terephthalate G Copolyester
pH	Hydrogen ion concentration
PID	Photo Ionization Detector
POP	Performance-Oriented Packaging
PPE	Personal Protective Equipment
PVA	Polyvinyl Alcohol
PVC	Polyvinyl Chloride
RCRA	Resource Conservation and Recovery Act
RFI	Radio Frequency Interference
RTK	Right-to-Know
S.E.T.R.A.F.	Safety of Enclosures for Toxics using Recirculating Filtration
SAE	Society of Automotive Engineers
SARA	Superfund Amendment and Reauthorization Act
SBR	Styrene Butadiene Rubber
SCBA	Self-Contained Breathing Apparatus
SCT	Spectrum Control Technology
SEI	Safety Equipment Institute
SPCC	Spill Prevention, Control and Countermeasures
STEL	Short-Term Exposure Limit
TDS	Totally Dissolved Solid
TLV	Threshold Limit Value
TSCA	Toxic Substance Control Act
TWA	Time Weighted Average
UEL	Upper Explosive Limit
UFC	Uniform Fire Code
ULPA	Ultra-Low Penetration Air (filtration)
USDA	United States Department of Agriculture
USP	United States Pharmacopoeia
UST	Underground Storage Tank
UV	Ultraviolet
VDT	Video Display Terminal
VGA	Video Graphics Array
VOC	Volatile Organic Compound
WBGT	Wet Bulb Globe Temperature
WEEL	Workplace Environmental Exposure Limit
WHMIS	Workplace Hazardous Materials Information System
YAG	Yttrium Argon Gallium

ESH ALERTS !!!!

NEW ESH MANAGER
John Casey

John Casey has recently taken the position of ESH Manager**.**
Prior to joining the ESH team, John was a Senior Regulatory Affairs Specialist with Apogent Technologies, with oversight responsibilities for ES&H, quality, and FDA compliance. Prior to joining Apogent, John worked in Public Health, and was the Director of Environmental Services for the Town of Westford, Massachusetts from 1995-1999.

Fisher Scientific Intranet
Environmental Safety and Health

The Environmental Safety and Health Department now has its own site on the Fisher Scientific Intranet. The site contains an organizational chart and departmental contact information, including email and phone numbers. There are downloads of current and previous versions of the ESH Newsletter. Also available is a link to Fishertrainer and a downloadable "how-to" guide. A useful links page was also created containing many links to Web tools and Web pages to be used in the field. The ESH portion of the Regulatory Affairs Manual is also available. The manual contains the most current and revised versions of ESH programs, policies, forms, appendices, and tools.

The ESH department is always open to new ideas and additions to the page. Please feel free to contact us with any content to be added.

The site can be accessed through any computer that has access to the Fisher Scientific Intranet. Environmental Safety and Health has a link under the Shared Services tab. It can also be found on the intranet here: http://fishernet/esh/

The "SAFETY ZONE"

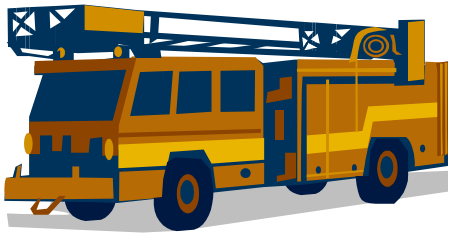
Be Safe At All Times ...

FIRE SAFETY

October is Fire Safety Month

Smoke alarms:

Smoke alarms are designed to warn you and your family of a fire, giving you time to get out of your home safely. Properly functioning smoke alarms can cut your risk of dying in a fire by at least half, but only if you maintain them in good working condition. Here are some important points to remember about smoke alarms:



* Install at least one UL-certified smoke alarm on each floor of your home, including the basement and outside of each sleeping area.
* Read and follow the manufacturer's instructions when installing a smoke alarm.
* Test all smoke alarms at least monthly.
* Replace smoke alarm batteries once a year.
* Replace your smoke alarms every 10 years.

Fire Extinguishers:

A fire extinguisher is another important part of fire safety in the home. Be sure to purchase the correct type of fire extinguisher for your needs and maintain it properly.

* A multi-use fire extinguisher (type ABC) can be useful in controlling most small house fires.
    * Install an UL-certified fire extinguisher on each floor of your home and in the rooms where fires are likely to start, such as the kitchen and garage areas.
* Install fire extinguishers within easy reach.
* Make sure that your fire extinguishers are fully charged at all times.
* Recharge or replace a fire extinguisher after each use.
* Learn how to use a fire extinguisher before you need it.

Fire Escape Plans:

Smoke alarms, carbon monoxide alarms and fire extinguishers are all important parts of fire safety, but don't forget about your fire escape plans. Practice your fire escape plan at least twice a year with all members of the household. A few important things to remember when creating your fire escape plan:

* A good fire escape plan should include at least **two** ways to get out of a room, particularly for occupied areas above the first floor.
* Make sure all exits are free from any obstructions, inside and outside.
* A smoke alarm may not wake up some children, older adults and people with special needs or on medications. You should be aware of this when making your escape plan.
* Also, designate a meeting place a safe distance away from your home for everyone to gather.

Carbon Monoxide Alarms:

Carbon monoxide (CO) is a deadly gas created when something burns. You can't see it, smell it or taste it. In the home, some sources of carbon monoxide (CO) can include any gas burning appliances, fireplaces, barbeque grills and automobile exhaust. Installing carbon monoxide (CO) alarms can help protect your family from this silent killer. A few important things to remember about carbon monoxide and their associated alarms:

* Install an UL-certified carbon monoxide alarm near each sleeping area and at least five feet away from any fuel-burning appliance.
* Test all CO alarms at least monthly.
* Replace CO alarm batteries at least once a year.
* NEVER use a gas or charcoal gill indoors.
* Regularly clean and inspect your chimney and have all of your fuel burning appliances including your furnace inspected at least once a year.
* Never ignore a CO alarm, or any other alarm in your home. They are there for your safety.

The "RECYCLE BIN"

RAG REFRESHER

Fisher has a written compliance program for the management of used rags and wipes – even when these items are being sent off-site for laundering. Here is a brief synopsis of the program. All states have their own specific requirements regarding the management of these items as wastes, and some state regulations have been summarized in the Regulatory Affairs Manual (Program 105.01 Appendix 6).

1. CONDUCT A WASTE CLASSIFICATION OF THE WIPES
    a) Separate wipes that have been used with any chemical or solvent.
    b) Document the waste classification of the wipe based on the process generating the waste (e.g. degreasing or spill cleanup), the solvent used or the characteristic of the wipe.
    c) If the wipes are classified as **hazardous waste** or they **contain free liquids**:
        i. They must be disposed of through ONYX Environmental Services as hazardous waste or non-hazardous waste;
        ii. If the waste is hazardous then the waste must be kept in a closed container with a label that reads "Hazardous Waste" and kept **either** at an satellite accumulation area or timed accumulation area with the date of accumulation marked on the drum.
    d) If the wipes have been documented as **non-federal or non-state hazardous waste**, and are not going for laundering:
        i. Ensure that all other state requirements are met (e.g. in Illinois these wipes may need to be handled as special waste, in Pennsylvania they must be handled as residual waste).
2. TO LAUNDER WIPES OFF-SITE
    a) Ensure that the wipes have been documented as non-federal or non-state hazardous waste in Step 1;
    b) Ensure that wipes contain no free liquid;
    c) Review state regulations to determine any additional requirements.
3. TO LAUNDER WIPES ON-SITE
    a) Ensure that the wipes have been documented as non-federal or non-state hazardous wastes in Step 1;
    b) Obtain approval, in writing, from the local Publicly Owned Treatment Works to receive the waste stream by providing them the nature of the chemical(s) on the rag, the volume of the laundry operation, and the type of detergent you plan to use. Discharge the wastewater to the POTW only when the POTW gives you written permission.

Please contact Regulatory Affairs if you need a summary for your state or if you would like to have the laundering of other items researched.

NEXT ISSUE OF THE ESH NEWSLETTER

- **Waste and Tier II Reports**
- **Winter Safety**
- **OSHA 300**

If you have any questions about these topics, please contact one of the contributors by e-mail or telephone.

P.S. We are always open to suggestions on format or topics.
